

Viro Shield

CLEAN | DISINFECT | PROTECT
program

1 . CLEAN

All high contact surfaces get hand cleaned

2. DISINFECT

EPA registered disinfectant applied to kill airborne and surface viruses (including COVID19), bacteria, and microbes

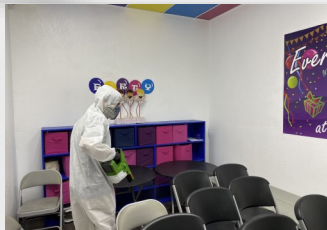

3. PROTECT

Long lasting anti-microbial coating applied electrostatically for complete coverage lasting up to 90 days

Applying EPA registered disinfectant

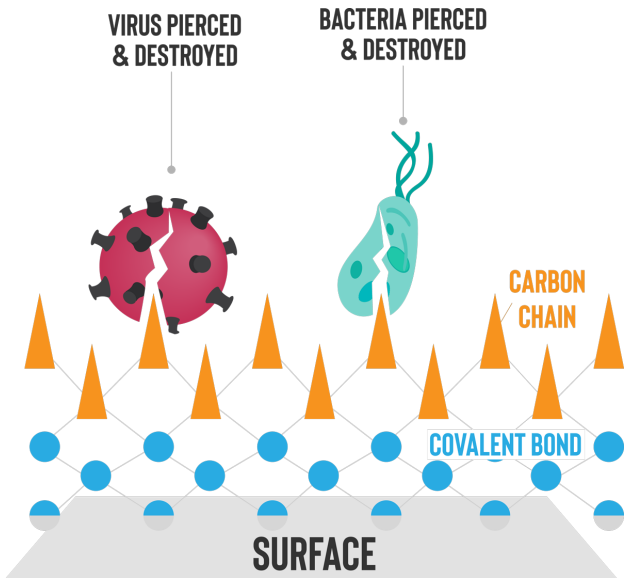

Applying coating with electrostatic sprayer

828-684-1693

PROTECT YOUR FACILITY TODAY!

Disinfectants typically don't provide much protection from new microbes from settling or growing on surfaces. Once someone walks by and places their hand on that surface after it has been disinfected, it again becomes immediately contaminated. It would be unfeasible to constantly disinfect surfaces after human contact. Therefore, as the final and critical step in the ViroShield program we apply a long term coating.
